We have wondered...

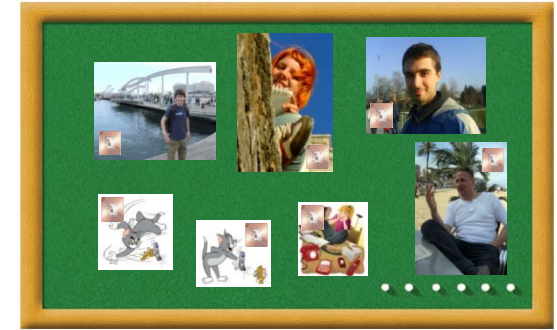

- ... how to help individuals who have problems with usage of communication devices
 - Move person's favourite contacts from a digital phone book to the personal contacts border
 - Add NFC tag to each photo/image on the border
 - Touch and Communicate!

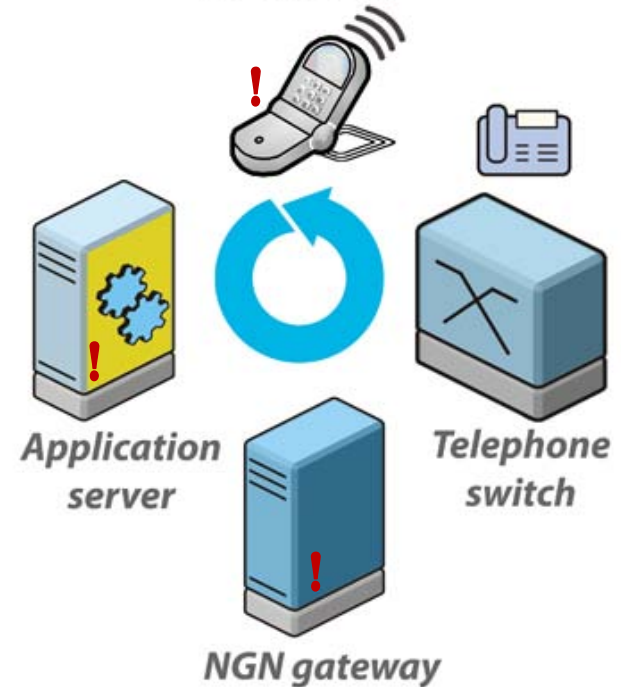

Touch to Communicate . . .

What do we need?

- Client side application on the NFC enabled mobile device which acts as a remote controller
- Server side application to accept client's requests
- Open interfaces on the north side of the NGN network
 - Parlay X
 - REST/JSON
- A lot of knowledge and passion to make our idea come true

NFC device

Now we can touch to...

📞 Dial

- 📞 Creating third party call

📞 Create Conference

- 📞 Adding new participant to the conference

📞 Redirect Calls

- 📞 Redirect incoming calls in real time

📞 Set Forwarding

- 📞 Setting forwarding

📞 Get Missed Calls Information

- 📞 Get missed calls information of the controlled device to your NFC mobile device

📞 Send SMS

- 📞 Sending short messages to multiple persons

Touch to Communicate . . .

Touch to Communicate . . .

Thank You for Your support and
inspiration!
